# 1.0 Health Outcomes

## 1.1 Hospitalization rate for ambulatory care sensitive conditions

English

Français

2024-03-04

**i** Hospitalization for ambulatory care sensitive conditions is considered a measure of access to appropriate primary care. While not all admissions for these conditions are preventable, it is assumed that appropriate ambulatory care could prevent the onset of this type of disease or condition, help control an acute care episodic disease or condition, or help manage a chronic condition or disease.

**🕒** Precision  
There are 7 favourable conditions: COPD, angina, asthma, diabetes, hypertension, heart failure, epilepsy Excludes those aged 75 and older Excludes deaths

**📐** Formula  
Total number of cases over 12 months / Area population

**👤** Leadership  
Dre.Natalie Banville Patrick Parent

# 2.1 Percentage of level 4 and 5 visits to the emergency department

English Français

2024-01-16

Indicator that indirectly shows the level of access to primary health care in a given region.

**i** This indicator reflects the percentage of level 4 and 5 visits to the Emergency Department. When visiting the Emergency Department, the acuity of the visit will be coded based on the Canadian Triage and Acuity Scale. Level 4 and 5 visits to the Emergency Department are considered less urgent.

**gauge** Precision  
Patients referred to the community or who leave without seeing the doctor are included in the indicator.

**Σ** Formula  
(Total number of visits coded 4 and 5 / Total number of visits to Emergency) X 100

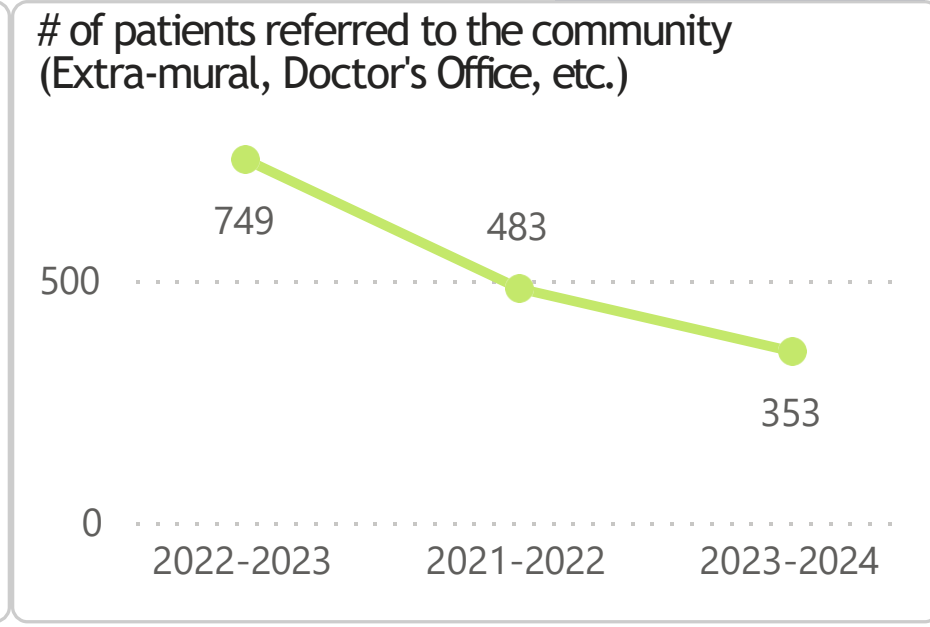

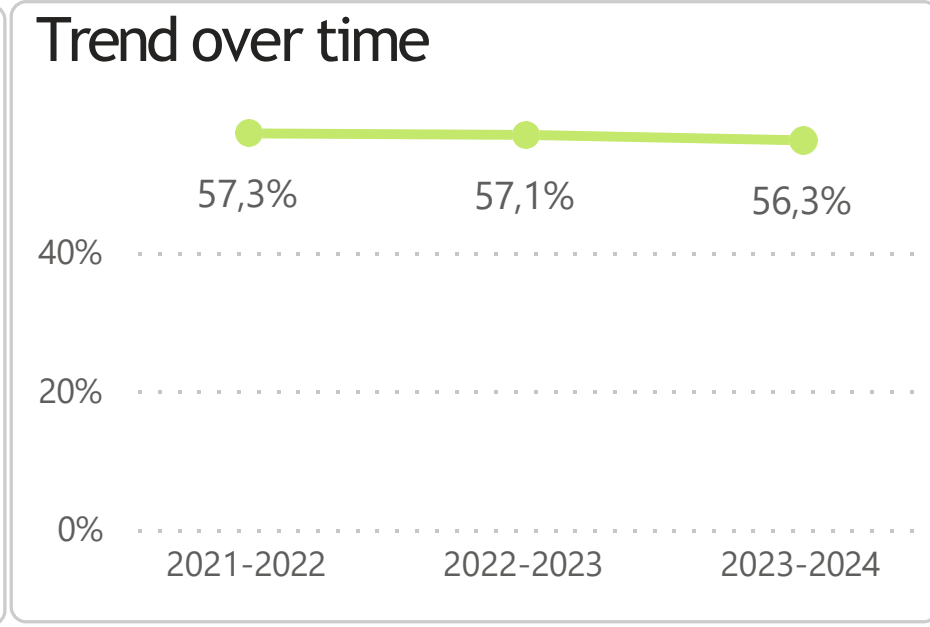

**person** Leadership

## 2.2 Repeat hospital stays for mental health and substance use

English Français

2024-01-16

Indicator that shows the percentage of patients who have had repeat hospitalizations due to mental illness.

**i** This indicator measures the risk-adjusted percentage of individuals who have had 3 or more episodes of care for mental health and substance use disorders among all those who had at least one episode of care for mental health and substance use disorders in general or psychiatric hospitals in a given year.

**Précisions**  
**⚙️** Responsible discharge diagnoses: Substance use disorders and addictive disorders, schizophrenia and other psychotic disorders, mood disorders, anxiety disorders, selected personality and behavioural disorders, other disorders.  
 Readmission within the same facility

**Formula**  

$$\frac{\text{Total number of individuals who had at least 3 episodes of care for MHSU disorders [repeat hospitalizations] in a 1-year period}}{\text{Total number of individuals who had at least one episode of care for MHSU disorders in a 1-year period}} \times 100$$

# 4.0 Organizational Excellence

## 4.1 Actual versus CIHI expected length of stay ratio

Indicator that shows the effectiveness of length of stay in Network hospitals.

**i** This indicator represents the effectiveness of the length of stay in our hospitals for typical cases. It represents the difference between the length of stay in acute care and CIHI's expected length of stay. Typical cases exclude deaths, transfers between acute care facilities, discharges against physician advice, and extended stays (beyond the demarcation point). ALC days are also excluded from the calculation for this indicator.

**🕒** Precision  
None

Indicator that shows the percentage of surgeries waiting more than one year.

2024-03-04

**i** For surgeries waiting, wait times are calculated for surgeries waiting as of the last day in each quarter from the date that the patient and surgeon agree to the surgery and the patient is ready to receive it. Wait time is calculated using data collected through the Surgical Access Registry. These statistics do not include emergency surgeries. Timeframes during which the patient was not available to have surgery are excluded from wait time calculations.

**🕒** Precision: Categories are grouped and divided according to the number of months >365 days

**Σ** Formula: Number of surgeries waiting more than 12 months / Total surgeries waiting

**👤** Leadership: Dre.Natalie Banville

**🗄️** Data source: Surgical Access Registry

**📏** Unit of measurement: Percentage

### 4.3 Overall hospital readmission rate

English Français

Indicator that shows the rate of readmission within 30 days of a patient's discharge from hospital.

2024-03-04

**i** This indicator measures the risk-adjusted rate of urgent readmissions within 30 days of discharge for episodes of care for the following patient groups: obstetric, pediatric, surgical and medical.

**gauge**  
Precision  
None

**Σ** Formula  
Observed number of readmissions for each facility / Expected number of readmissions for the facility × Canadian average readmission rate
